# Berk Peker

## Backend & Cloud Engineer · Java, Spring Boot, AWS, Python

berkpeker94@gmail.com · Tampere, Finland · github.com/berkpeker2707 · LinkedIn · berkpeker2707.github.io

## Education

**MSc, Computer Science**
Tampere University, Finland
Aug 2026 – present
Courses: Data-Intensive Programming (Spark, Scala), Recommender Systems, Regression Analysis, Bayesian Analysis

**BSc, Software Engineering**
Bahçeşehir University, Istanbul
2019

## Skills

**Languages**
Java, Python, TypeScript, JavaScript, SQL, Scala

**Backend**
Spring Boot, Node.js, Express, REST APIs, microservices, event-driven design

**Cloud & DevOps**
AWS (EKS, EC2, ECR, S3, SQS, EventBridge, API Gateway, AppSync, CloudWatch, CloudTrail, Secrets Manager), Kubernetes, Docker, Argo Workflows, GitHub Actions, Jenkins

**Data**
PostgreSQL, DynamoDB, OpenSearch, MongoDB, Firebase, Apache Spark

**Frontend & Mobile**
React, React Native, Redux Toolkit, Electron

**Ways of working**
Scrum (Scrum Master), Git

## Projects

**habitune (2023–2024)**
Social habit-building app.
GitHub

**WAIPE (2021)**
Social media app for pets.
GitHub

**MULA (2020–2021)**
Dating app based on the Myers–Briggs Type Indicator.

## Languages

Turkish (native)
English (IELTS 7.5)
German (beginner)
Finnish (studying)

## Profile

Software engineer with 5 years of experience building backend, cloud and data systems in Java Spring Boot, Python and AWS. Most recently worked on BMW's autonomous-driving data platform, reprocessing sensor data at scale on Kubernetes. Now doing an MSc in Computer Science at Tampere University, focusing on data-intensive systems and machine learning. Looking for a part-time, summer or thesis role in backend, cloud or data/ML platforms.

## Work Experience

### Full Stack Developer & Scrum Master
Aug 2024 – Aug 2026
Luxoft – DXC Turkey · client: BMW Autonomous Drive (remote & on-site)

- Developed and maintained **RaaS (Reprocessing as a Service)**, BMW's platform for reprocessing recorded camera, radar and lidar data from autonomous-driving test vehicles.
- Built pipeline and backend components in Java Spring Boot and Python, running on AWS EKS with ECR, S3, SQS, EventBridge, API Gateway, AppSync, Secrets Manager and PostgreSQL; monitoring with CloudWatch and CloudTrail.
- Automated build, test and deployment with GitHub Actions and Argo Workflows.
- Refactored the Spring Boot codebase of the **AD Labeling Tool** and consolidated its microservices into a monorepo: about **50% fewer services** and about **80% lower memory usage**.
- Delivered features and bug fixes for internal tools (DataPortal, Markers, LichtBlick extensions) used by **182 BMW stakeholders**.

### Full Stack Developer & Scrum Master
Jan 2024 – Aug 2024
Kavi Bilişim (remote)

- Delivered a CRM and mobile application backend in Java Spring Boot for Dubai-based clients, using both monolith and microservice architectures.
- Designed and integrated DynamoDB and OpenSearch for production, enabling fast key-based access and full-text search.
- Built the client mobile app in TypeScript React Native with Redux Toolkit.
- Ran Scrum ceremonies and iterative delivery as Scrum Master.

### Full Stack Developer
Oct 2021 – Jun 2023
MOCUK Design (on-site)

- Built a MERN-stack employee management and customer service system with a TypeScript React Native client.
- Built an order-processing tool in Python and Java Spring Boot integrated with ShipStation (Amazon & Etsy): automated PDF generation and shipping-data handling.
- Built a shipping cost optimiser that routed orders to the nearest warehouse or production centre based on weight and address.
- Automated product design with Electron, Node.js and Illustrator/Photoshop scripting, replacing manual design steps (demo).
- Built a Slack bot with Google Sheets and Apps Script to move operational data to an external source (GitHub).

### Web Developer
Jan 2021 – Feb 2021
Xena Vision (remote freelance)

- Developed a frontend application in React.
